

ASK ANI

Vicky Tran

What is Ask Ani?

A digital data visual assistant that creates on-demand, dynamic visualizations in real time from simple questions utilizing artificial intelligence and natural language processing from data sets, such as cycle times, quarters, partners, employee metrics, and product insight.

Problem

- More efficient way to make different sets of data available.
- Easy and fast method to show our customers visual data of product insights, cycle times, quarters and partners during meetings, conferences, and presentations.

Persona

- Account Managers who want to present to customers and partners
 - VP & directors presenting at meetings and conferences
 - Any internal employee who are interested in seeing trends / data
 - how well each quarter compares to the last
 - Between regions
 - Between time of sales
 - Etc.
-

Persona: Cisco Account Manager

- Sells Cisco solutions, products, and services
- Achieve sales targets
- Build strong customer relationships
- Work with partners and others from Cisco to form sales teams to close deals
- Travel to customer sites, partner events, and various public meeting spots
- qualify a lead > manage opportunity > evaluate requirements > prepare and recommend solution > negotiate price > make install plan > get deal/approval assurance > place order > track order > change order > install > return
- Accountable for business growth
- Prospecting for opportunities, planning and collaborating with people of multiple disciplines, coordinating activities and resources for Cisco sales team, creating business reports, developing and delivering sales presentations, educating and sharing best practices with customers and partners to develop strong relationships, analyzing commissions

Persona: Account Manager

- Commercial AM: manages 30-400 small customer accounts, managing and leveraging/delegating to resources is crucial, knowledge spans many companies and topics, much business is 'partner led' meaning it is generated and booked through a partner – the commercial AM looks to partner AM to drive opportunities
- Enterprise AM: manages 1-8 large customer accounts, deals with a small volume of large transactions, business is 'cisco led' meaning it is generated by cisco – partners are still needed on the sales team, however, it is likely there will be more cisco resources on the sales team than the partners – enterprise AM typically drives the opportunity while keeping partners involved as appropriate, spends more time on account planning than on opportunity planning

Persona: Cisco Service Account Manager

- Identify and close as many new service sales opportunities as possible within an assigned sales territory
- Drives and motivates the Cisco Account Managers to sell service with all new product sales
- Collaborates with Cisco Inside Service Sales Team to ensure that all service renewals are addressed and closed on time with all possible up-sell and additions attempted
- Perform the roles of sales person, consultant, and service sme
- Qualify lead > manage opportunity > evaluate requirements > prepare and recommend solution > negotiate price > negotiate legal contract > get deal approval/assurance > place order > track order; throughout all – deals with renewals and contract management
- Service sales quota is typically much larger than the product and service quote of an individual Cisco Account Manager because one SAM will be covering the territory of many Account Managers
 - located in the field
 - Variations
- Enterprise SAM and Service Provider SAM: assigned to either a geographic region or a few large accounts
- Commercial SAM: assigned to a geographic region made up of small to medium sized customers, SAMs are not partnered with a Cisco Inside Sales Rep in which they must perform all renewal activities themselves
- Associate SAM: junior SAMs that are typically assigned one sales territory, many are former Cisco inside sales reps and so have extensive quoting tool expertise
- Channel SAM: assigned to Cisco's 1 tier and 2 tier partners to make sure these partners have everything they need to perform the service sales function, greater focus on training on our tools and programs, will mainly help when needed on large orders, service contract center experts

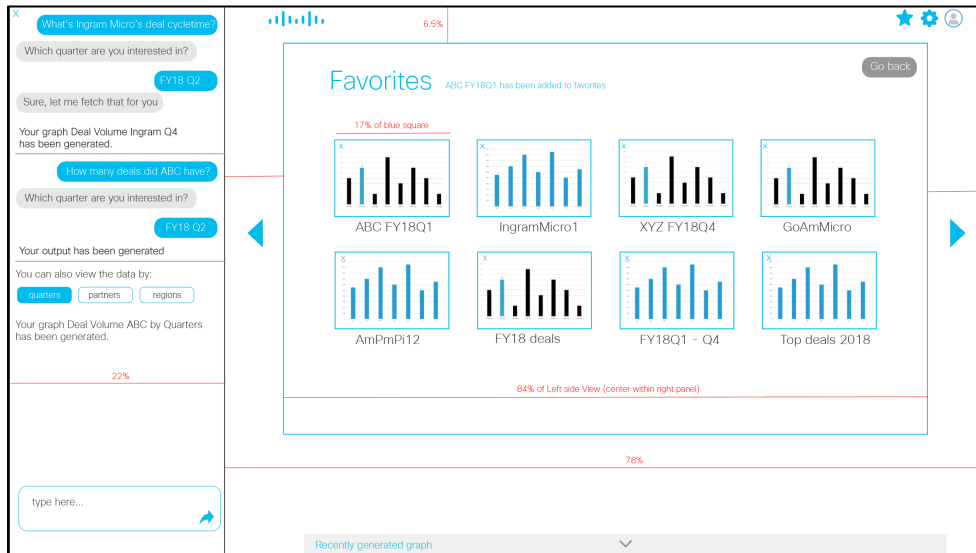

Design Constraints

- Teaching the Ani every possible word combination
- Wider range of types of data

Solutions

Create tool that can analyze and display data that allows user to save and interact with the data from our CRM database.

Design a tool that allow users to generate visual charts, manipulate, save, customize, and interact with. we created a toll that had voice recognition that displays data in a variety of ways that users can customize, download, and share.

User Testing

- Cisco Account Managers & Other Internal Users
 - Tasks to complete
 - Display Q1 vs Q2 sales in the AMERICAS
 - Now change it to display APJAC
 - Change it to display only Q3 in APJAC
 - Download and Save a graph and raw data
 - Favorite a view
 - Re-open existing graph
 - Locate recently produced visual
 - Change the type of graph being displayed
 - Change the color scheme
 - Mute Ask Ani
 - How long did it take you to complete each task
 - Number of clicks
 - Time
 - Were you unable to perform a task or find what you were looking for? Which task was it?
 - Ease of use 1-5?
 - Were you satisfied with the types of graph it displayed?
 - How often do you use Ask Ani ?
 - When do they use Ask Ani?
 - What feature do they want to see?
 - What feature do they find most beneficial?
 - Additional Feedback?

Results

Ask Ani is currently being used by over 200 active users at Cisco during meetings, conferences and presentations. Reduced time spent on gathering data and producing visualization significantly.

Welcome Screen

The Design

The Prototype

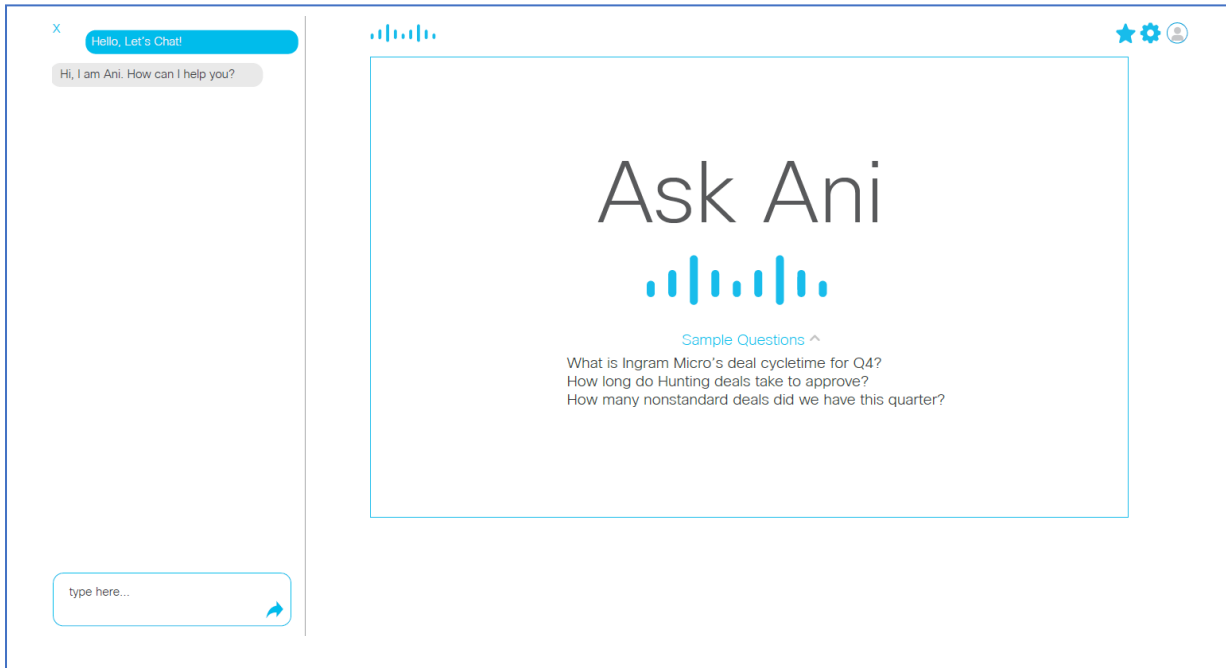

1. Please use the icons we provided and adjust the propositions to make them smaller
2. Increase the spacing between the elements to reflect proportions in the design
3. Change the button's proportions to reflect the design
4. Change the color of logo to the color of the button

Welcome Screen

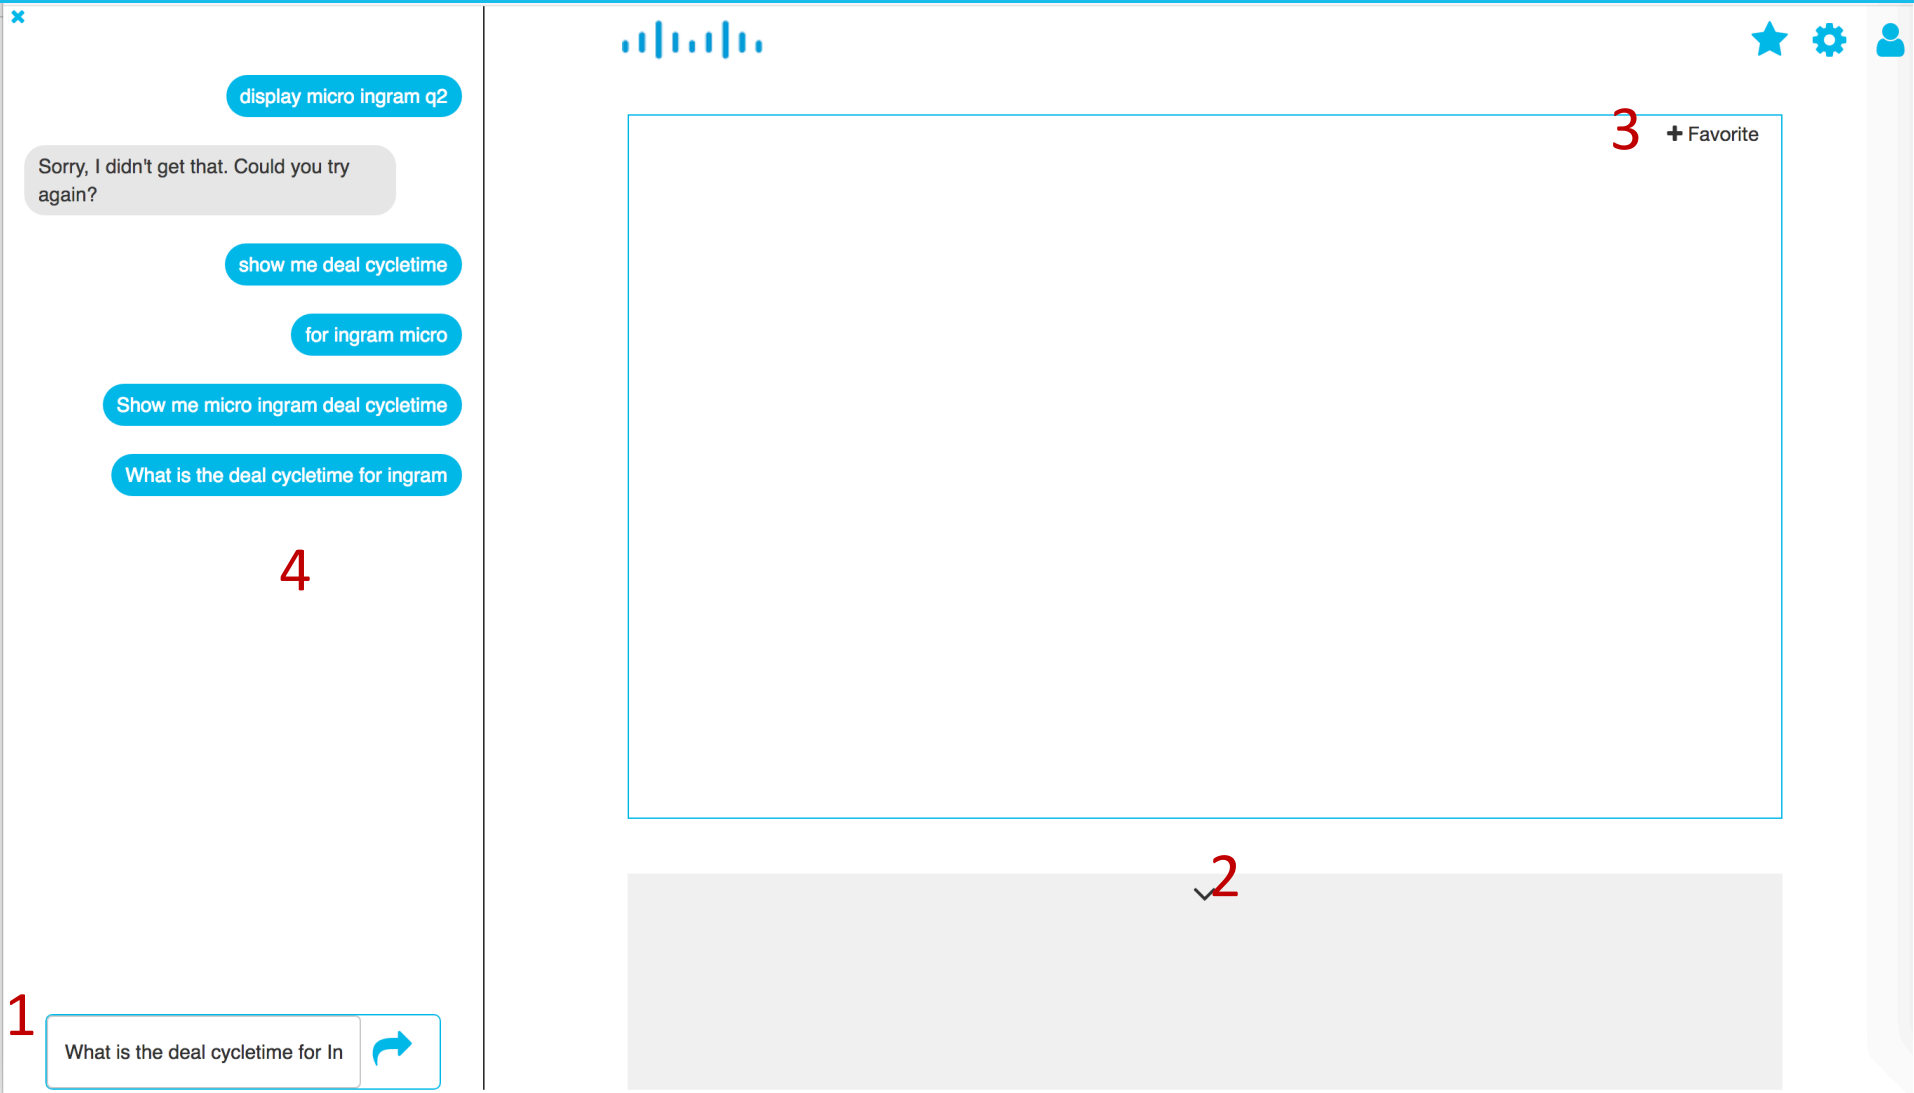

The Design

The Prototype

1. We need to display the user's greeting and Ani's reply
2. The message box needs to reflect the design. "Type here" text, size, and format
3. We need to display all the Landing elements included in the design
4. Adjust the proportions to reflect the design
5. Adjust the color and the proportions of the logo

Welcome Screen

1. Can this be text wrap so there is at least 2-3 lines instead of making the beginning of the text disappear.
2. Element not yet needed. The default should be minimized until there is content
3. Disabled when not needed [gray out]
4. Loading progress icon needed OR a respond after each submit

Graph

ingram micro deal cycle time
