

The xArray reader system

Redesign

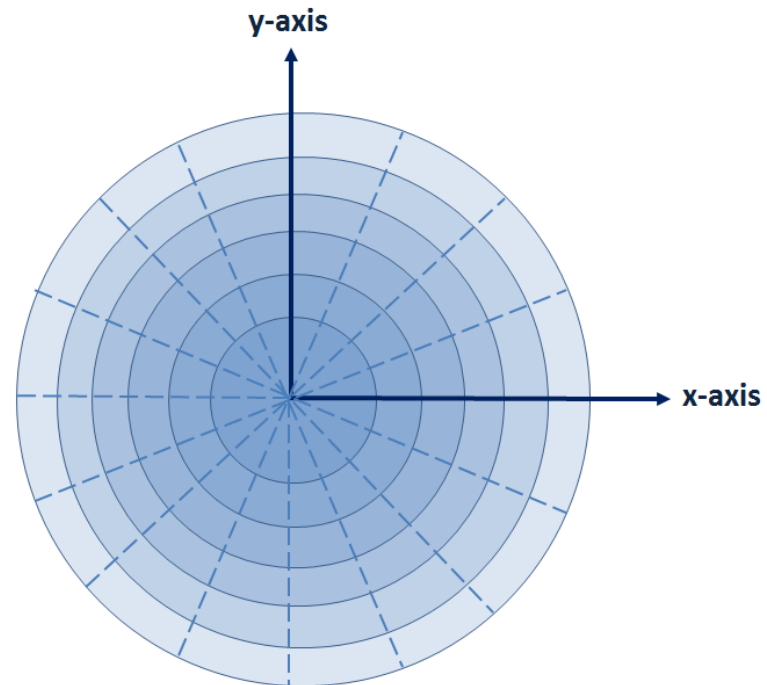

Vicky Tran
June 2014

1: the cone

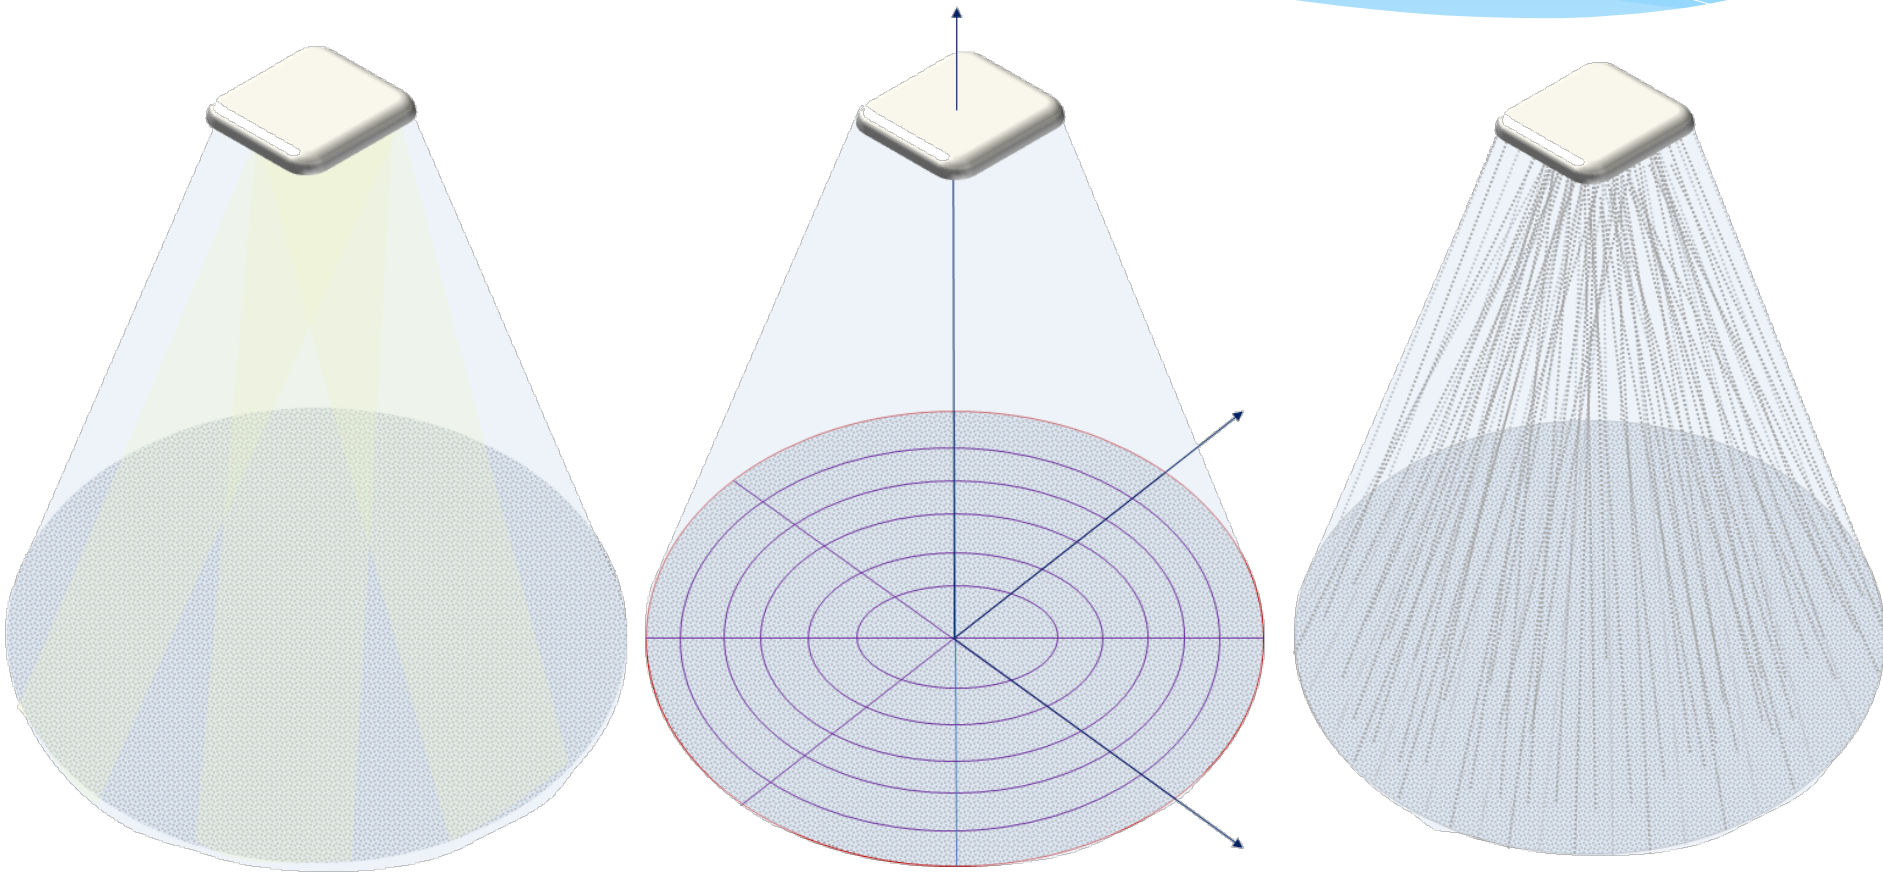

2: with axis labels

3: colors

4: style

Easy programming using LLRP and Impinj extensions

Low profile design
measuring 18 x 18 x 2.5
inches. Fits into standard
ceiling tile grid and
blends into any décor.

52 antenna beams for
field diversity and
enhanced readability

Beam forming 2-D
array radiated a
linear beam pattern
in vertical and
horizontal paths to
read tags in and
orientation.

Advanced locating
capability provides (x,y)
estimates with each
item read.

Up to 1,500
square feet of
coverage.

Robust tag
direction
capability which
supports real
world movement
patterns.

Easy to use and maintain
with IEEE 803.2af PoE, tilt
sensor to detect when out
of alignment, hysteresis
feedback to alert when
antenna may be blocked
and customizable beacon
